### **Company Overview**

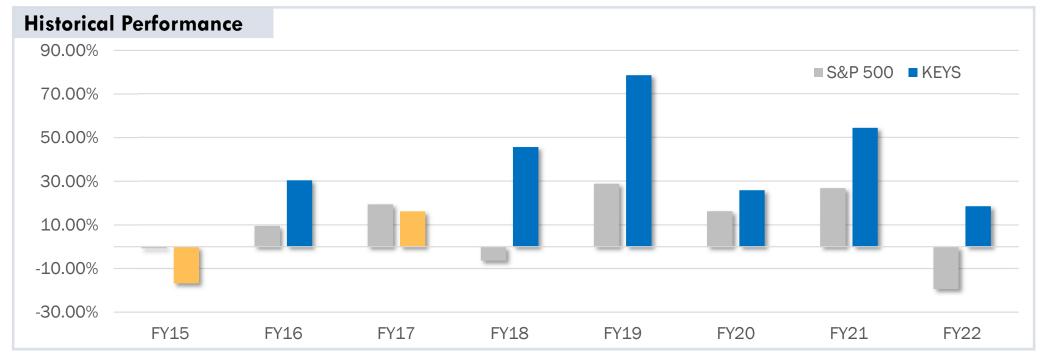

#### **Key Highlights**

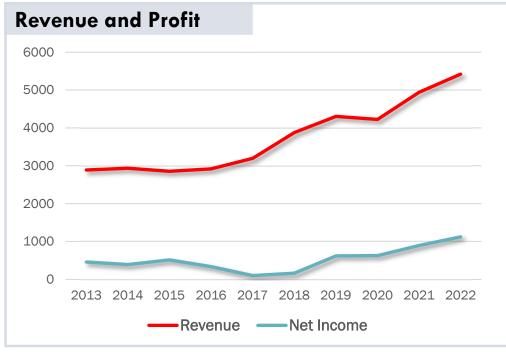

- Keysight Technologies is the market leader for electronic testing and optimization technology.
- Keysight has 2 main operating segments servicing 2 types of customers: the Communications Solutions Group and the Electronic Industrial Solutions Group. Keysight has 30,000 customers with none making up more than 10% of revenue.
- Products and Services: In each segment, Keysight focuses on delivering end-to-end testing solutions through:
  - Hardware & Equipment
  - Testing Software
  - Professional Services.
- Keysight is working to expand its software & services revenue to increase stickiness and margins. Last year service revenue saw a 6% increase.

Sources: 10-K, Morningstar Patrick Henry Investment Group

### **Financial Overview**

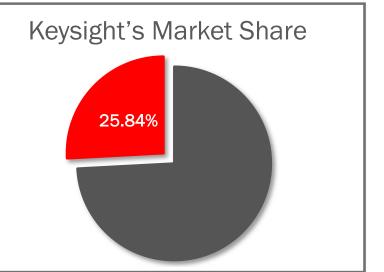

#### Summary

- KEYS has outperformed the S&P 500 6 out of the past 8 years.
- KEYS revenue is broken down between the CSG and EISG segments. CSG accounts for 68% of revenue. EISG accounts for 32% of revenue.
- KEYS has seen reliable growth in both revenue and profit. Since the company's spinoff in 2014, revenue has had a 9% CAGR, while net income has had an 11% CAGR.

### **Industry Analysis:** Summary

#### **Industry Overview**

- Electronic Testing & Optimization companies produce and service instruments and software enabling electronic innovation.
- These companies are essential for electronics manufacturing and enjoy high margins.
- While there are 5-8 significant players in the market, Keysight controls the largest chunk of market share – nearly 26%.

Porter's Five Forces				
Competitive Rivalry	<b>New Entrants</b>	Power of Suppliers	Power of Buyers	Substitutes
High	Medium/Low	Low	Medium	Low
<ul> <li>8+ Testing companies already in market.</li> <li>Innovating market reduces durability of competitive advantages.</li> </ul>	<ul> <li>Innovation allows new entrants</li> <li>Significant entry-level capital requirements.</li> </ul>	<ul> <li>Large choice of suppliers for electric components (semiconductors, cables, sensors, etc.)</li> </ul>	<ul> <li>Large customer base (most electronics companies and network providers).</li> <li>Relatively low switching costs.</li> <li>Companies become integrated into product ecosystem.</li> </ul>	<ul> <li>No replacement for electronic testing equipment.</li> </ul>

### Sustainable Competitive Advantage

Generic Business Unit Strategy		
Product Leadership Leapfrog of New Products: Innovation Product Differentiation Unique Features, Product, and/or Service	Operational Excellence Unmatched Focus; Quality, Price & Ease Operational Competency Std Product, Good Quality, Capable Delivery	Customer Intimacy  1:1 Bonding; Specific Customer Needs  Customer Responsive  Loyalty thru Broad Marketing/Service Focus

#### Advantage - Strategic Dimensions & Distinctives (Economic Moat)

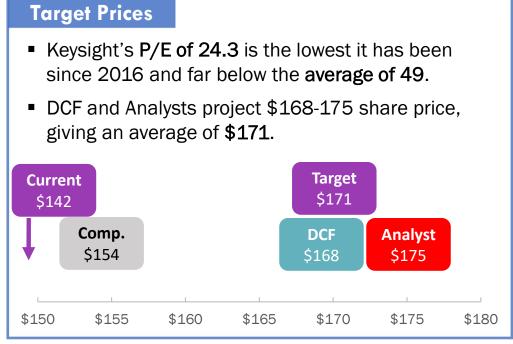

- Product Leadership: Keysight is the market leader for electronic testing equipment. Not only does Keysight have the largest product offering, the company maintains that lead by introducing numerous new devices every year.
  - Keysight has 3800+ U.S. and foreign patents and 73+ types of active products.
  - Keysight leads the field for R&D spending. In 2022, Keysight spent \$841 million on R&D 90% more than its nearest competitor.
- Keysight is increasing stickiness and widening its economic moat via end-to-end product offerings and increasing its revenue from services and software.
  - Keysight's wide portfolio of products and PathWave integration software create an ecosystem that encourages customers to use more Keysight devices.
  - Software and services have low costs and increase margins and profitability. Keysight has successfully grown its services revenue by 13% and 6% the last two years.
- Operational Efficiency:
  - Keysight has solid gross and net margins that it has grown over the last 5 years. Keysight's net margin is currently at 20.7% – a 1760 bp increase from 2017.
  - Keysight has a solid balance sheet with high cash levels and low debt.

### **Investment Summary**

#### **Investment Thesis**

- Keysight is in a market with significant macroeconomic tailwinds. As the leading electronic testing company, Keysight is well positioned to capitalize on growth in 5g, cloud networks, semiconductor manufacturing, and electric vehicles.
  - 5g growth is already evident in the CSG segment, which saw 8% growth in 2022.
  - Electric vehicle-oriented sales drove 18% growth in the EISG segment in 2022.
- Substantial R&D Spending ensures that Keysight will remain a leader in the market.
- Market fears have driven down Keysight's price. However, we believe that the macroeconomic trends in Keysight's favor outweigh the possible detrimental effects of a recession. Thus, this price drop offers an attractive entry point.

### **Industry Tailwinds**

#### **Tailwinds**

## 5G and loT Development

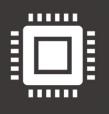

- Since 2019, 5G infrastructure/networks have seen development on a wide scale. Currently around 30% of the world has access to 5G. By 2028, analysts predict that will have grown to 85%.
- Electronic Testing Instruments are crucial to 5G and IoT (Internet of Things) development. Growth in these sectors will see increased demand for testing products and contracted services.

## Electric Vehicle Utilization

- Climate concerns and energy costs are driving demands for EVs (Electric Vehicles). Since 2015, global EV production has grown by 50% annually.
- Looking to 2030, McKinsey projects that EVs will account for 47% of all new auto sales.
- Developments in EV production require new battery, sensory, and networking technology testing instruments.

## Semiconductor Demand

- With the CHIPS Act and other legislation, the Federal government is subsidizing Semiconductor production infrastructure. Semiconductors and microchips will stay in high demand looking to the future.
- Semiconductor manufacturing requires thorough testing and optimization.

### **Industry Headwinds**

#### Headwinds

## Possible Recession

- A potential recession would have a negative impact on consumer electronics spending and corporate investment in testing equipment.
- Losses for tech companies will have a downward effect on testing companies' revenue. Many companies have seen a decline in revenue in Q4 2022 and Q1 2023.

## Supply Chain Breakdowns

- Covid-19 and labor shortages have broken many international supply chains.
   These disruptions slow manufacturing and create backlogs.
- Reliant on electronic materials/components, electronic testing companies suffer in the case of supply chain breakdowns.

# International Trade Restrictions

- Poor relations with China are leading to enhanced international trade restrictions. Tariffs deter exports and imports, while other regulations prevent the export of strategic technologies.
- Electronic testing technology can be considered strategically valuable. Recently, companies have faced government action.
- Companies will suffer if denied access to China's growing market.
